

P.S. I don't see anything this letter
to Mr. Smith he stated, (and I
think with reason), that having
a correspondence his name could
not with propriety be put as
in charge of a lecture with the
signature; but he agrees frankly
to help & to advise with me;
and I expect I look to him,
steadily to direct the mechanical
lecture.

W.B.

You will receive a roll which

submits the proposition by date
of the three remaining for the
four lectures. It is the same
entire paper Mr. Cole is using
for his plan on a scale of $\frac{1}{10}$
of an inch.
